INTERNAL ENGINEERING RECORD

PB-81 Field Evaluation Index

Northwest field installation, service, and equipment-movement references

Record: 81-PB-03
Project: PB-81
Revision: A
Date: November 18, 1981
Archive Status: PARTIAL

ARCHIVE NOTICE

PARTIAL TRANSFER. This electronic archive copy contains surviving index pages associated with PB-81 field evaluation. Several installation, service, equipment-return, and image references listed by the source index are not represented by transferred documents.

ELECTRONIC ARCHIVE COPY
PARTIAL / 03.30.98

1. Field Index Scope

The PB-81 Field Evaluation Index consolidates references created for temporary engineering installations administered through Northwest Field Operations. It is an index of field activity and associated records; it is not a complete installation or service history.

Record class	Transferred condition
Field assignment summaries	PARTIAL
Installation sheets	INDEX REFERENCES ONLY
Configuration cross-references	AVAILABLE
Remote-service references	PARTIAL / INDEXED
Equipment return records	PARTIAL
Photographic records	INDEXED; electronic image unavailable
Program media	REFERENCED; NOT TRANSFERRED

Northwest Field Operations, Beaverton, Oregon, is identified as the coordinating service office. Engineering questions and configuration changes were referred to Sunnyvale Research & Development.

2. Field Evaluation Summary

Index ref.	Configuration	Activity	Record state
FE-01	CFG 3	Initial field installation / display verification	INDEX + SUMMARY
FE-02	CFG 3	Operator-interface and program revision check	PARTIAL
FE-03	CFG 3A	Service substitution / configuration restoration	INDEX
FE-04	Temporary field reference	Short-duration engineering assignment	INDEX ONLY
FE-05	Temporary field reference	Additional field evaluation entry	INDEX ONLY

Configuration 3 is the principal field-evaluation configuration identified by the surviving index. Temporary references FE-04 and FE-05 do not include complete transferred configuration sheets.

The index marks Configuration 3 evaluation activity as completed. Complete disposition records for all equipment associated with the field references are not present in the transferred archive.

3. Equipment Movement and Installation References

Ref.	Item / action	Origin / control	Disposition reference
MV-01	CFG 3 controller/display package	Sunnyvale Engineering	FE-01 installation index
MV-02	OIF-O3 field control assembly	Sunnyvale / Northwest	FE-01 installation index
MV-03	Remote-service communications equipment	Northwest Field Operations	Service record reference
MV-04	Replacement interface assembly	Northwest service stock	FE-03 substitution index
MV-05	Return / reassignment entry	Field configuration	SOURCE RECORD NOT TRANSFERRED

Installation sheets are referenced by the source index but are not included in the electronic transfer. Available index information identifies the responsible service office, applicable configuration, and related service references without reproducing customer-specific installation details.

4. Service Communications and Diagnostic References

Selected PB-81 field entries use the serial service interface with communications equipment administered by Northwest Field Operations. Remote service is recorded as a diagnostic function supporting configuration verification and fault isolation.

Reference	Class	Index information
SRV-F1	Local field service	Startup verification and configuration check.
SRV-R1	Remote diagnostic	Controller / display status query.
SRV-R2	Remote diagnostic	Configuration and event-log retrieval.
81-PB-04	Service record	INDEX ONLY - separate service record.
COMM-3	Communications configuration	Field communications equipment reference.

Remote diagnostic activity is associated with a service-session reference assigned by the field-service system. This index does not reproduce complete session transcripts or command records.

5. Field Program and Operator-Interface References

Reference	Configuration	Description	State
PRG-P2.4	CFG 3	Field evaluation program media	FIELD USE COMPLETED
OIF-O3	CFG 3	Field operator-control assembly	CONFIGURATION CONTROLLED
TIM-3.2	CFG 3	Approved display timing set	CONFIGURATION CONTROLLED
DIAG-R2	CFG 3	Remote-service diagnostic media	SERVICE
OBS-F	Field records	Observation / evaluation record series	PARTIAL INDEX

Physical control geometry and labeling are contained in field or test records not fully represented in the electronic transfer.

Program media are referenced for configuration control only. No PB-81 field program image or source listing is included in the transferred archive.

6. Evaluation Closure and Equipment Disposition

Field evaluation records indicate that temporary PB-81 equipment was to be recovered, reassigned, or returned to engineering inventory following completion of the applicable assignment. The transferred index does not contain a complete closure record for every field reference.

Reference	Recorded closure / disposition
FE-01	Evaluation activity completed; related return reference listed.
FE-02	Evaluation entry closed; observation record partial.
FE-03	Service substitution closed after configuration restoration.
FE-04	Index entry present; complete closure sheet not transferred.
FE-05	Index entry present; equipment-disposition record not transferred.
MV-05	Return / reassignment record referenced; source document not transferred.

Absence of a transferred closure or return record does not by itself establish that equipment remained deployed. The field index records only surviving references available to the archive transfer.

7. Related Records and Transfer Exceptions

Record	Description	Electronic state
81-PB-01	PB-81 Engineering Summary	TRANSFERRED
81-PB-02	PB-81 Configuration Index	TRANSFERRED
81-PB-04	PB-81 Service Record	INDEX ONLY
PB81-PH-02	PB-81 Field Configuration Photograph	FILE NOT PRESENT
PRG-P2.4	Field evaluation program media	NOT TRANSFERRED
DIAG-R2	Remote diagnostic service media	NOT TRANSFERRED
MV-05	Return / reassignment record	NOT TRANSFERRED

Field	Entry
Service Office	Northwest Field Operations
Service Class	Remote Diagnostic
Project	PB-81
Session Reference	81-4F2
Associated Service File	NOT TRANSFERRED

PARTIAL TRANSFER. Missing source documents and electronic objects are represented by their original index references where practical.
